Notes:  
The table contain data based on annual summaries while the maps are based on monthly data.  
\*iButtons are portable data loggers designed to withstand harsh environments  
M = Missing due to incomplete data  
1 Growing degree days (GDD) are calculated as total GDD and may include GDD units outside the period April 1st to October 31st. GDD are not available for 2007  
2 Growing degree days for 2010 were calculated using the average hourly temperature over a 24-hour period instead of the daily mean temperature  
3 Frost free period is calculated as the difference between the Julian date of first Fall frost and the Julian date of the last Spring frost. FFP is not available for 2007

This series of maps was produced by Dave Whiting and Associates pro bono using the Solar Analyst module within the Spatial Analyst Extension of ArcGIS 9.2. This modelling tool calculates the potential radiation in Killowatt Hours per Square Metre (kWh/m2). The topography of the landscape was incorporated using a Digital Elevation Model at a 25 metre resolution. This map shows potential solar radiation that has been calculated by the model and aggregated for a month. Atmospheric conditions such as cloud and smoke were excluded in the calculations. This map is one of 36 map sheets (Three map sheets are required to show the geographical extent of the area between Lytton and Big Bar at a 1:50,000 scale; map sheets are available for each month).

These maps products can support a variety of planning and assessment processes associated with agricultural development, solar energy utilization, forestry, environmental assessment and ecological research. They have been produced in support of developing a "Climate and Feasibility Assessment of Growing Wine Grapes in the Lillooet- Lytton Area, British Columbia" - a research partnership that includes the British Columbia Grape Growers' Association, local property owners, Investment Agriculture Foundation of BC, and provincial and federal agencies. Further information on this project including additional long-term climate data, progress reports, specific grape trial information can be found at [www.grapegrowers.bc.ca](http://www.grapegrowers.bc.ca) Other web sites that host reports on this project are:

- o [www.al.gov.bc.ca/grape/fctsheets/htm](http://www.al.gov.bc.ca/grape/fctsheets/htm)
- o [www.fraserbasin.bc.ca/publications/fbc.reports.html](http://www.fraserbasin.bc.ca/publications/fbc.reports.html)

The solar radiation maps have been produced by Dave Whiting and Associates. Information on the solar radiation map team and access to free downloadable PDF files of the maps can be found at <http://www.solarradiationmapping.ca> Special thanks to Steve Losso for providing iButton climate data and John Vielvoye, P.Ag. for his invaluable input and expertise.
